

Name \_\_\_\_\_ Date \_\_\_\_\_

## Language worksheet 8A

- 1 Look at the method below and complete the sentences with words from the box.  
Yoti buys two toy cars. She pays with a \$10 bank note. How much change does she get?

<p>Estimate:  <math>4 + 3 = 7</math>  <math>10 - 7 = 3</math></p>	$\begin{array}{r} 4.49 \\ + 3.09 \\ \hline 7.58 \\ \hline 1 \end{array}$	$\begin{array}{r} \overset{9}{\cancel{10}}.\overset{9}{\cancel{0}}\overset{1}{0} \\ - 7.58 \\ \hline 2.42 \end{array}$
---	--	--

add    estimate    compact    regroup    decimal    subtract    trailing

- a Before you calculate, you should \_\_\_\_\_.
- b The method above uses a \_\_\_\_\_ method of recording.
- c The number 4.49 has two \_\_\_\_\_ places.
- d This method uses \_\_\_\_\_ zeros.
- e With this method you do not \_\_\_\_\_ the numbers.
- f With this method, you \_\_\_\_\_ the two amounts then \_\_\_\_\_ from ten dollars.

- 2 Look at the method below and complete the sentences with words from the box.

subtract	sum	estimate	express	regroup	decimal
----------	-----	----------	---------	---------	---------

$$\begin{array}{r}
 4.49 \rightarrow 4 + 0.4 + 0.09 \\
 +3.09 \rightarrow \underline{3 \quad \quad + 0.09} \\
 7 + 0.4 + 0.18 = 7.58
 \end{array}$$

$$\begin{array}{r}
 10.00 \rightarrow 9 + 0.9 + 0.10 \\
 -7.58 \rightarrow \underline{-7 - 0.5 - 0.08} \\
 2 + 0.4 + 0.02 = 2.42
 \end{array}$$

- The \_\_\_\_\_ for the answer is three dollars.
- In the method above, we \_\_\_\_\_ to add and subtract the numbers.
- In the number 7.58, five is in the first \_\_\_\_\_ place.
- When you regroup, you can \_\_\_\_\_ three point zero nine as three plus zero point zero nine.
- After you regroup ten as nine plus zero point nine plus zero point one zero, you \_\_\_\_\_ the \_\_\_\_\_ of the first two numbers.
